Bon je vais tester mais je pense avoir trouvé la solution à mon problème, grace à ce sujet en anglais :

<http://myhpmini.com/forum/viewtopic.php?f=59&t=4426&start=0>

"Yes, I have just managed it and have joined this forum to let someone know how because I could not find a solution anywhere on the internet.

I have a Compaq Mini 311C 1101SA (running Windows XP) and I want to create backup images. I use either PowerQuest DriveImage 2002 or DriveImageXML. I usually do this by booting from a BartPE usb drive, but I have been struggling to get this PC to boot with BartPE. It could not see the internal disk.

I downloaded and unpacked the nVidia SATA drivers from:

[http://www.nvidia.com/content/DriverD ... l.exe&lang=us&type=nForce](http://www.nvidia.com/content/DriverD...l.exe&lang=us&type=nForce)

I created an nLite XP boot CD (using WinXP SP3) and slipstreamed nvgt.s.inf from the sata_ide directory in the drivers above. This booted OK. Then I noticed that nLite had inserted nvgt.s drivers into the XP source directory on my hard disk. So I created a BartPe.iso (using this modified source) and used pe2usb to create the usb drive. On booting the PC with this, it could not find nvgt.s.sys. So I copied the sata_ide directory to C:\Program Files\pebuilder3110\drivers\SCSIAdapter and rebuilt. This works!"
