Hi,

There is always place to improve results. If you found app that is not supported yet in recALL please send me info (or put in [keit.co/wiki](http://keit.co/wiki) - anonymous ). LicenseCrawler is using different technique of searching (scanning all registry nodes and searching words like "SerialNo", "Code", "Registration" etc).

I'm using direct paths like

HKEY\_CURRENT\_USERSoftwareAdobe[\*]Registration and searching string used by producent "SERIAL", "serial\_number" (Adobe example), and decrypt them if is needed.

recALL was originaly desiged to recover password. License recovery was added later ( big update was in 13.12 - <http://keit.co/p/recall-13-12/> )

Most important function for me is importing license keys from broken Windows. For example copy SOFTWARE file from C:WindowsSystem32config and using other Windows or Linux + Wine you can get passwords and keys.

Best regards

Maciej Kaczowski
