Hi,

There is always place to improve results. If you found app that is not supported yet in recALL please send me info (or put in keit.co/wiki - anonymous). LicenseCrawler is using different technique of searching (scanning all registry nodes and searching words like "SerialNo", "Code", "Registration" etc).

I'm using direct paths like

HKEY_CURRENT_USERSoftwareAdobe[*]Registration and searching string used by producent "SERIAL", "serial_number" (Adobe example), and decrypt them if is needed.

Hi Maciej,

I'm trying to retrieve in my registry the licenses/serial numbers of my personal softwares missing in recALL results.

I will provide to you the results of my research.

Best regards,
Bernard
