hello,
nouvelle maj ce matin: v5 beta 12

- "Max line length exceeded" in non-conforming email no longer causes a message check failure, and can be previewed.
- Test Account (POP): More robust fast UIDL test. Fixes erroneous report that UIDL is not supported if mailserver does not implement the CAPA command.
- Fixed: Rules Tab remained in English regardless of language selection in 5.0.10-11
- French (Canada) translation updated
- Deleting Mail (POP): fixed message numbers being out of sync with server after deleting messages. Disconnecting and reconnecting to check for new mail after delete is needed for POP.

bonne installation
