Question 4:

Why don't you offer a product for Windows 98?

With Avira you are using one of the most modern and most innovative antivirus solutions. To do justice to this claim, we develop our products continually. However, this also means putting an end to obsolete practices.

Starting July 2006, Microsoft discontinued the support for Windows 98/ME. As announced some time ago on Product lifecycle information page on www.avira.com, we do not offer new versions and updates for Windows 98/ME virus protection any longer.

We recommend that you switch to a current Windows operating system and we assure you that we will continue to provide maximum protection at all times.
