Originally created by Ivo Beltchev, *this fork is true to the first - to help improve productivity by allowing you to enhance the usability of Windows through a customizable start menu.*
You will be able to manage the way you use your PC via multiple style templates and skins. It also gives you quick access to recent, frequently-used, or pinned programs.
You will also be able to quickly find any programs, settings, files, or documents with minimal keystrokes once you have it configured to your specific needs.
