Nouvelle pépite découverte via *MajorGeeks*

(un excellent site, où on ne passe pas son temps à se chamailler)

Testé illico, en portable, sur deux vieilles conf winXP (Home et Pro) en 32-bit et deux win7 (Pro) en 64-bit.

Hé bien, mon Pote (*myPal*) tient ses promesses ! et l'icône n'est pas moche...

Quand il m'arrivait de me servir d'une vieille bécane XP, comme je regrettais mon vieux PaleMoon ! MyPal tombe du ciel !

Description par l'auteur :

About Mypal

Mypal is a current and maintained Windows XP web browser. Mypal is based on Moonchild Productions' Pale Moon code, which itself was forked from Mozilla's FireFox code several years ago, but is also maintained and kept current.

The goal of Mypal is to provide a current, secure, and reliable web browser for Windows XP. Mypal operates identically to Pale Moon with some minor exceptions. Introduced new portable system and certain settings, including unused legacy Mozilla code, have been removed.

Download Mypal at **GitHub**. Automatic updates are not currently supported, so you will need to check for new releases manually. Updates can be installed over existing Mypal installations without loss of data and settings.

Mypal documentation is available online in wiki format.

Support / Contact

Support is provided exclusively on GitHub. Please be patient with your support requests. You can also review existing issues on GitHub before requesting support.

Please do not request support from Moonchild Productions or in Pale Moon forums. Mypal is an independent project and support is provided solely on GitHub by me.
