La 4.5.1 vient de sortir :

<https://leminhthanh.me/antillogger/>

Nouveau site semble-t-il.

ChangeLog :

- Support .zip format when using Scan with LMT Anti Logger feature.
- Redesigned notification window.
- Removed the Homepage Guard feature because it is not effective.
- Added Korean language, thanks KOLANP.com for his translation.
- Added Scanning files on access option. LMT Anti Logger use File-System Filter Driver and scans files where they first enter the system.

Note: If you already have Antivirus software installed, you may not need to enable this option.
