Version 5.2

https://www.fmjsoft.com/acdr.html#main

Added support for writing embedded cover art image meta data. It can write this to ID3v2-tags (.AIFF, .FLAC, .MP2, .MP3, .WAV), APE-tags (.APE, .WV), as well as format specific picture meta data (.FLAC, .OGG, .WMA).
The output options page has a new "Album cover art" section, where you can add an image file (.jpg, .png or .gif). Either select one from disk, or drag and drop a file here, or drag an image from your web browser onto the ACDR window. There's also an option to write a Cover.jpg file in the output folder.
When writing to BWF .WAV format and enabling EBU R.128 normalization, a loudness range value is calculated and added to the BWF chunk (in addition to the loudness value; c.f. EBU tech note 3342).
Added an "Apply capitilization rules" command to the context menu of the input files list. This changes the first letter of every word of the track names to upper-case, except for the following, which are lower-cased: a, an, the, of, to, on, from, in, by, and, or, nor, for, but (unless it is the first word, or following a colon).
 The program and the installer executables are now digitally signed for improved security.
