v.115.0.0
   Based on 115 ESR branch (Which will be the last ESR for Windows 7/8/8.1 cry)
   FIXED WINDOWS TITLEBAR THEMEING ISSUE!! > Fixes #16 and #12
   Enabled PGO (Profile Guided Optimization) for Windows builds. (Nice)
   Cross compiling for Windows on Linux now finally work, although you can't enable PGO
   Performance is now on par or above vanilla Firefox (Usually ~10 points higher on Speedometer in my testing)
   It now sends a user agent with Firefox (as well as Mercury) in the name, so it should fix #11 and #22 and #14
   Enabled the Global Privacy Control header, as was suggested to me in #20. Is better than Do Not Track (which is also enabled)
   GPU acceleration should now properly recognize OS version info. Fixes > #18
   Changed default top bar buttons. It now goes Back - Forward - Home - URL box - Developer Tools - Extensions - Main Menu
   It should keep whatever you have it set to, but if it doesn't, you can always recustomize it (and please file a bug)
