v 1.4.1

Portable version: Fixed some helper apps crashing on startup, which broke functionality such as the start menu search.

Portable version: The installer now grants permissive access rights to the engine folder, which are required for some mods.

Standard version: Fixed schedule tasks being incorrectly enabled on update.

Fixed update notifications showing up when update checking is disabled.

Fixed the installer mistakenly showing the "Setup is already running" error message in some cases.

Windhawk no longer tries to use git outside of editing mode.

Mod development: Restored the default constructor of WindhawkUtils::SYMBOL_HOOK.

Mod development: Fixed a compilation error when calling Wh_FindFirstSymbol with NULL as the second parameter.
