Sylvie vient de nous annoncer la sortie de la v 4.7.

Je viens de lire sur le site concerné les recommandations suivantes :

"Important Legal Notice: Previous versions of FastStone Image Viewer (versions 2.7 and lower) and FastStone Capture (versions 4.6 and lower) contain a copyright issue with some of the icons employed. If you have any of these versions in your possession, you must immediately completely uninstall and/or delete them, ceasing any and all use of these program versions. This issue has been resolved in the current versions (versions 2.8 and 4.7, respectively) of the noted programs. Please ensure you use the latest versions of FastStone Image Viewer and FastStone Capture".

Faut-il vraiment désinstaller :?: :!:

Merci
